LONDON’S GLOBAL UNIVERSITY

BIOPROCESSING OF NEW MEDICINES (SCIENCE AND ENGINEERING) BSc /
UCAS CODE: B190
2018 ENTRY

www.ucl.ac.uk/prospectus/biochemeng
Bioprocessing of New Medicines (Science and Engineering) BSc /

There is a growing need for graduates with a grounding in biological sciences who are able to understand the translational new technologies required for new medicine commercialisation. This BSc focuses on the early stage development of new medicines, such as stem cell, new vaccines and potential new therapies related to healthcare.

Key information

Programme starts
September 2018

Location
London, Bloomsbury

Degree benefits

// This flexible programme enables you to choose different options from an approved list, thereby tailoring your degree towards the engineering, biological or business aspects of new medicine development.

// The department has amongst the most modern and comprehensive biochemical engineering facilities of any university in the world. Valued at over £35 million, they attract leading industrial collaborators.

// Our teaching is designed to help you work at a detailed analytical level, and also to see the bigger picture in terms of addressing environmental and ethical issues.

// We have been pioneers in providing our undergraduates with training to help them understand the business environment in which life science industries operate. This prepares you better for your future career.

Research Excellence Framework (REF) 2014

The Research Excellence Framework, or REF, is the system for assessing the quality of research in UK higher education institutions. The 2014 REF was carried out by the UK’s higher education funding bodies, and the results used to allocate research funding from 2015/16.

// 90% rated 4* ('world-leading') or 3* ('internationally excellent')

Learn more about the scope of UCL’s research, and browse case studies, on our Research Impact website.

Degree structure

In each year of your degree you will take a number of individual modules, normally valued at 0.5 or 1.0 credits, adding up to a total of 4.0 credits for the year. Modules are assessed in the academic year in which they are taken. The balance of compulsory and optional modules varies from programme to programme and year to year. A 1.0 credit is considered equivalent to 15 credits in the European Credit Transfer System (ECTS).

In the first year, you will study the fundamentals of biochemistry and cell biology, which are required to understand the technologies used in early stages of new medicine development. Case studies will look at the challenges of creating new medicines, disease states and the ethical considerations of working in the biopharmaceutical industry.

The second year examines the intricate signalling structures within the human body, and looks at the immune memory that new vaccines seek to stimulate. In addition, you will be required to consider the commercialisation of new medicines and will develop your knowledge of intellectual property and how to manage it in a global market.

The research project is a core component of the third year, along with modules in business planning and the bioprocessing of new medicines. At least one optional module is offered every year of your programme, enabling you to tailor your degree towards the business side of the new medicines industry or the biomolecular side.

YEAR ONE

Core or compulsory module(s)

// Biochemistry and Molecular Biology
// Bioprocess Analysis
// Chemistry for Biologists
// Fluid Flow and Mixing in Bioprocesses
// Introduction to Biochemical Engineering
// Introductory Statistical Methods and Computing

Optional modules

// You will select 0.5 credits from a range of options.

YEAR TWO

Core or compulsory module(s)

// Cell Production and Growth
// Downstream Processing
// Evaluation and Planning of Business Opportunities in Bioprocessing and Life Sciences
// General Biochemistry of Health
// Manufacturing Regenerative Medicines: from lab bench to industry

Optional modules

// You will select 1.0 credit from a range of options.

FINAL YEAR

Core or compulsory module(s)

// Advanced Materials, Devices and Manufacturing Processes for Regenerative Medicine
// Bioprocess Research Project
// Business Planning in Bioprocessing and Life Sciences
// Regenerative Medicine
// Vaccine Bioprocessing

Optional modules

// You will select 1.0 credit from a range of options.
Your learning

You will be taught through a combination of lectures, case studies, team-based projects and experiments. Leading industrialists and researchers regularly visit the department to provide guest lectures. Case studies are conducted in small teams, and your personal and departmental tutors are available to offer individual support.

Assessment

Written examinations, individual reports, coursework and oral presentations all contribute towards your assessment.

Your career

The core science, engineering, business and leadership skills that you acquire on the programme will provide you with excellent and diverse career prospects. In addition to your core subject knowledge, the programme will provide you with skills such as innovative thinking, team-working and computing.

The excitement of advances towards new medicines and greener sustainable processes is creating an ever-growing need for biochemical engineering graduates in the biotechnology, pharmaceutical, biofuels, chemical, environment and food industries.

The first cohort of students admitted to the Bioprocessing of New Medicines (Science and Engineering) BSc programme graduated in 2015. Therefore, information about career destinations for students on this programme is currently emerging. Many of our students have gone on to further study in a particular specialism, such as an MSc in Bioscience Enterprise. Others have gone on to take MRes programmes and are now embarking upon PhDs.

Your application

Application for admission should be made through UCAS (the Universities and Colleges Admissions Service). Applicants currently at school or college will be provided with advice on the process; however, applicants who have left school or who are based outside the United Kingdom may obtain information directly from UCAS.

In addition to academic requirements, we will also use your application to assess your motivation for studying bioprocessing. We will be seeking applicants committed to studying at the highest level, who are eager and able to rise to the challenges presented both by the programme and by a career in the discipline.

If we are considering making you an offer and you live in the UK, you will be invited to an applicant open day. Your visit will provide an excellent opportunity to examine the departmental facilities before making a final decision.
Entry requirements

**A LEVELS**

**Grades**
A*AA-AAA

**Subjects**
Biology required.

**GCSE**
English Language and Mathematics at grade C or 5. For UK-based students, a grade C or 5 or equivalent in a foreign language (other than Ancient Greek, Biblical Hebrew or Latin) is required. UCL provides opportunities to meet the foreign language requirement following enrolment, further details at: www.ucl.ac.uk/ug-reqs

**IB DIPLOMA**

**Points**
38-39 overall.

**Subjects**
A total of 18-19 points in three higher level subjects including Biology, with no score below 5.

**OTHER QUALIFICATIONS**
UCL considers a wide range of UK and international qualifications for entry into its undergraduate programmes. Full details are given at: www.ucl.ac.uk/otherquals

**UNDERGRADUATE PREPARATORY CERTIFICATES (International foundation courses)**
The Undergraduate Preparatory Certificates (UPCs) are intensive one-year foundation courses for international students of high academic potential who are aiming to gain access to undergraduate degree programmes at UCL and other top UK universities.

Typical UPC students will be high achievers in a 12-year school system which does not meet the standard required for direct entry to UCL.

For more information see: www.ucl.ac.uk/upc.

**TUITION FEES**
The fees indicated are for undergraduate entry in the 2018/19 academic year. The UK/EU fees shown are for the first year of the programme at UCL only. The Overseas fees shown are the fees that will be charged to 2018/19 entrants for each year of study on the programme, unless otherwise indicated below.

// UK & EU: £9,250 (2018/19)
// Overseas: £25,960 (2018/19)

Full details of UCL’s tuition fees, tuition fee policy and potential increases to fees can be found on the UCL Students website.

**FUNDING**
Several major international companies have established a Trust Fund with the department. This fund provides five bursaries, each worth at least £1,500, which are open to all applicants of this programme.

Various funding options are available, including student loans, scholarships and bursaries. UK students whose household income falls below a certain level may also be eligible for a non-repayable bursary or for certain scholarships. Please see the Fees and funding pages for more details.

**CONTACT**
Dr Brenda Parker
