The BEng programme aims to equip you with the analytical and design skills relevant to a wide range of engineering employers. The teaching of computing and management skills is an important part of the programme.

Key information

Programme starts
September 2018

Location
London, Bloomsbury

Degree benefits

- Our top-quality laboratory and testing facilities include materials testing equipment, wind tunnels, two large wave tanks and an array of engine test cells.
- You will benefit from our internationally renowned research expertise as this cutting-edge knowledge is passed on to you through our teaching.
- The flexible programme structure enables you to transfer between the BEng and MEng degree programmes up to the end of the second year.
- We offer you a degree that is highly respected both within the UK and abroad.

Research Excellence Framework (REF) 2014

The Research Excellence Framework, or REF, is the system for assessing the quality of research in UK higher education institutions. The 2014 REF was carried out by the UK’s higher education funding bodies, and the results used to allocate research funding from 2015/16.

- 90% rated 4* ("world-leading") or 3* ("internationally excellent")

Learn more about the scope of UCL’s research, and browse case studies, on our Research Impact website.

Accreditation

The programmes are accredited by the Institution of Mechanical Engineers (IMechE) as meeting the academic base requirements, in part, for registration as a Chartered Engineer for the 2014-2021 student cohort intakes.

Degree structure

In each year of your degree you will take a number of individual modules, normally valued at 0.5 or 1.0 credits, adding up to a total of 4.0 credits for the year. Modules are assessed in the academic year in which they are taken. The balance of compulsory and optional modules varies from programme to programme and year to year. A 1.0 credit is considered equivalent to 15 credits in the European Credit Transfer System (ECTS).

The BEng programme is similar to the MEng programme for the first two years and you may transfer between them at the end of the second year, depending on certain criteria. Applying for a MEng initially helps keep your options open. The BEng is suitable for students who might wish to undertake graduate studies in the future (e.g. an MSc or PhD) or who do not necessarily seek Chartered Engineer status after they graduate.

You will undertake an individual project as a major component of the third year.

This degree is part of the Integrated Engineering Programme (IEP), a teaching framework that engages students in specialist and interdisciplinary engineering activities designed to create well-rounded graduates with a strong grasp of the fundamentals of their discipline and a broad understanding of the complexity and context of engineering problems. Students register for a core discipline, but also engage in activities that span departments so the development of fundamental technical knowledge takes place alongside specialist and interdisciplinary research-based projects and professional skills. This creates degrees encouraging professional development, with an emphasis on design and challenging students to apply knowledge to complex problems.

Students may opt to take a year working in industry between the second and third years of the programme. This posting needs UCL approval in advance, and students are required to write a comprehensive report on their work and what they have learnt during the year. The report is assessed, and the marks are given a weighting in the overall classification of the degree.

Optional modules

- Students must take one module in their chosen minor subject from the Integrated Engineering Programme. See www.engineering.ucl.ac.uk/integrated-engineering/minors/ for the available subjects.
### FINAL YEAR

**Core or compulsory module(s)**
- Advanced Thermodynamics and Fluid Mechanics
- Dynamics and Control
- Elasticity and Plasticity
- Individual Project

**Optional modules**
- You will study two modules in the minor subject chosen in year two.

### Your learning

You will be taught in a variety of ways, including lectures, tutorials, laboratory classes, computer workshops and project work. Along with our computing facilities we have extensive equipment and apparatus, housed in our main laboratories, which are used for taught laboratory classes and for your project work.

**Assessment**
Most subjects are examined through a combination of end-of-year examinations and coursework, but some are solely examined through coursework, for example, computing, design and projects. To transfer into an MEng programme you are required to maintain a standard equivalent to (at least) lower second-class Honours level throughout your studies.

### Your career

You will develop the fundamental analytical and design skills necessary to become a professional mechanical engineer in your chosen field of employment, whether in industry or in a consulting/research organisation.

Your career options can be in a variety of fields including aerospace, railways, motor vehicle design, manufacturing and medical engineering. The programme also equips you with the necessary skills to work in commerce, banking, and management consultancy.

First career destinations of recent Mechanical Engineering BEng graduates (2013-2015) at UCL include:
- Analyst, Barclays
- Project Engineer, Saudi Aramco
- Financial Consultant, Shanghai Zi Mao Chu
- Engineering & Manufacturing Graduate, Rolls Royce Motors
- Full-time student, DPhil in Material Science at University of Oxford

### Your application

Application for admission should be made through UCAS (the Universities and Colleges Admissions Service). Applicants currently at school or college will be provided with advice on the process; however, applicants who have left school or who are based outside the United Kingdom may obtain information directly from UCAS.

In addition to our essential academic requirements, we will expect your application to explain how you became interested in the subject, and what steps you have taken to discover more about studies and careers in engineering.

---

Data taken from the 'Destinations of Leavers from Higher Education' survey undertaken by HESA looking at the destinations of UK and EU students in the 2013-2015 graduating cohorts six months after graduation.
Entry requirements

A LEVELS

Grades
AAA

Subjects
Mathematics and Physics required. Further Mathematics, Economics or Design and Technology preferred as third subject, but not essential.

GCSE

English Language and Mathematics at grade C or 5. For UK-based students, a grade C or 5 or equivalent in a foreign language (other than Ancient Greek, Biblical Hebrew or Latin) is required. UCL provides opportunities to meet the foreign language requirement following enrolment, further details at: www.ucl.ac.uk/ug-reqs

IB DIPLOMA

Points
38 overall.

Subjects
A score of 18 points in three higher level subjects including Mathematics and Physics at grade 6, with no score below 5. Economics and Further Mathematics preferred as third higher level subject, but not essential.

OTHER QUALIFICATIONS

UCL considers a wide range of UK and international qualifications for entry into its undergraduate programmes. Full details are given at: www.ucl.ac.uk/otherquals

UNDERGRADUATE PREPARATORY CERTIFICATES (International foundation courses)

The Undergraduate Preparatory Certificates (UPCs) are intensive one-year foundation courses for international students of high academic potential who are aiming to gain access to undergraduate degree programmes at UCL and other top UK universities.

Typical UPC students will be high achievers in a 12-year school system which does not meet the standard required for direct entry to UCL.

For more information see: www.ucl.ac.uk/upc.

TUITION FEES

The fees indicated are for undergraduate entry in the 2018/19 academic year. The UK/EU fees shown are for the first year of the programme at UCL only. The Overseas fees shown are the fees that will be charged to 2018/19 entrants for each year of study on the programme, unless otherwise indicated below.

// UK & EU: £9,250 (2018/19)
// Overseas: £25,960 (2018/19)

Full details of UCL's tuition fees, tuition fee policy and potential increases to fees can be found on the UCL Students website.

FUNDING

Various funding options are available, including student loans, scholarships and bursaries. UK students whose household income falls below a certain level may also be eligible for a non-repayable bursary or for certain scholarships. Please see the Fees and funding pages for more details.
