PHARMACOLOGY MSci / UCAS CODE: B211 2019 ENTRY

www.ucl.ac.uk/prospectus
Pharmacology MSci

This programme is intended for students who want to pursue careers or further study in pharmacology or related disciplines. It offers an additional year on top of the Pharmacology BSc in which to undertake your own major, cutting-edge research project, alongside advanced modules.

Key information

Programme starts
September 2019

Location
London, Bloomsbury

Degree benefits

- Pharmacology at UCL offers you an outstanding academic environment. We are internationally renowned in the discipline and are recognised for numerous major discoveries.
- We combine excellence in pharmacology research with high-quality pharmacology teaching. We have particular expertise in areas such as neuropharmacology and immunopharmacology.
- In your final year, you will have the opportunity to join a world-leading research group, working side-by-side with some of the best scientists in the field and carrying out your own experimental research project.
- We offer state-of-the-art modern facilities, and are located adjacent to the Medical Research Council's Laboratory for Molecular Cell Biology, allowing for collaborative final year projects.

Degree structure

In each year of your degree you will take a number of individual modules, normally valued at 15 or 30 credits, adding up to a total of 120 credits for the year. Modules are assessed in the academic year in which they are taken. The balance of compulsory and optional modules varies from programme to programme and year to year. A 30-credit module is considered equivalent to 15 credits in the European Credit Transfer System (ECTS).

The subject of pharmacology is immensely broad and covers the areas of physiology, chemistry, neuroscience, biochemistry and genetics. As a result, some of your modules will be taken with other Life Sciences students and you will draw on expertise from across the faculty.

In the first year, all modules are compulsory, giving you a sound knowledge of the discipline and enabling you to identify your own strengths and interests. Year two mainly comprises compulsory modules, but by the third year you will take only one compulsory module, leaving you free to choose from a wide range of specialist options.

MSci students undertake a literature-based research project in their third year, whilst in year four, a compulsory, laboratory-based research project accounts for 50% of the year's work. You may find this particularly helpful in making choices about your future career and whether you would like to pursue postgraduate study.

You may also apply for a 'sandwich' year in your programme, taken between years three and four, spending your time in the pharmaceutical industry or another pharmacology-related area. These are offered on a competitive basis, but contacts between our staff and colleagues in industry open up many opportunities.

YEAR ONE

Core or compulsory module(s)
- An Introduction to Mechanisms of Drug Action
- Cells and Development
- Cellular and Molecular Biology
- Chemistry for Biology Students
- Mammalian Physiology
- Statistics

Optional modules
- All first year modules are compulsory.

YEAR TWO

Core or compulsory module(s)
- Biochemistry
- Experimental Pharmacology
- General and Systematic Pharmacology
- Immunity to Infection
- Structure and Function of the Nervous Systems

Optional modules
- Options may include:
  - Animal and Human Physiology - Maintenance and Regulatory Mechanisms
  - Cellular Neurophysiology
  - Developmental Neurobiology
  - Human Neuroanatomy
  - Management Information and Control
  - Medical Microbiology
  - Modern Languages
  - Science in the Mass Media
YEAR THREE
Core or compulsory module(s)
- Molecular Pharmacology
- Library Research Project (1.5 credits)

Optional modules
- You will select 2.5 credits of optional modules. Options may include:
  - Drug Design And Development
  - Immunopharmacology
  - Neuropharmacology
  - Psychopharmacology
  - Receptor Mechanisms
  - Synaptic Pharmacology: The Synapse, a Major Site Of Disease and Drug Action

FINAL YEAR
Core or compulsory module(s)
- Extended Research Project

Optional modules
- You will be able to select advanced modules from a wide range of options.

Your learning
Teaching is mainly conducted through lectures and laboratory classes together with regular small-group tutorials involving in-depth discussion of topics being studied. Modules run concurrently; lectures and tutorials are usually held in the morning with practical classes in the afternoons.

Assessment
You will be expected to submit coursework (e.g. essays and practical write-ups) and make oral presentations as part of your assessment. You will also take written examinations at the end of each year.

Your career
This programme not only provides detailed knowledge of the subject, but also trains you in planning, executing and analysing scientific projects and in quantitative and analytical skills. This will equip you with a versatility that will be very attractive to many employers.

Pharmacology brings together different aspects of biomedical sciences, opening up many fields of employment. If you are interested in laboratory research, you could progress to a postgraduate research degree (PhD) leading to opportunities in the pharmaceutical industry, government research institutes, hospital laboratories, forensic science or university-based research.

First destinations of recent graduates (2013-2015) of this programme at UCL include:
- Financial Analyst, HSBC
- Full-time student, PhD in Neuroscience at Aix-Marseille University
- Full-time student, PhD in MIBTP (Midlands Integrative Biosciences Training Partnership) at the University of Warwick
- Associate, Deloitte and studying Kaplan

Your application
Application for admission should be made through UCAS (the Universities and Colleges Admissions Service). Applicants currently at school or college will be provided with advice on the process; however, applicants who have left school or who are based outside the United Kingdom may obtain information directly from UCAS.

We will read your UCAS application to ascertain whether you meet, or are expected to meet, our academic entry requirements and also to find out why you are interested in pharmacology.
Entry requirements

A LEVELS
Standard Offer: AAB. Chemistry required plus one from Biology, Mathematics or Physics.

Contextual Offer: ABB. Chemistry required plus one from Biology, Mathematics or Physics.

GCSE
English Language and Mathematics at grade B or 6. For UK-based students, a grade C or 5 or equivalent in a foreign language (other than Ancient Greek, Biblical Hebrew or Latin) is required. UCL provides opportunities to meet the foreign language requirement following enrolment, further details at: www.ucl.ac.uk/ug-requirements

IB DIPLOMA
Standard Offer: 36. A total of 17 points in three higher level subjects including Chemistry and one subject from Biology, Mathematics or Physics, with no score below 5.

Contextual Offer: 34. A total of 16 points in three higher level subjects including Chemistry and one subject from Biology, Mathematics or Physics, with no score below 5.

CONTEXTUAL OFFERS – ACCESS UCL SCHEME
As part of our commitment to increasing participation from underrepresented groups, students may be eligible for a contextual offer as part of the Access UCL scheme. For more information see www.ucl.ac.uk/prospectus

OTHER QUALIFICATIONS
UCL considers a wide range of UK and international qualifications for entry into its undergraduate programmes. Full details are given at: www.ucl.ac.uk/otherquals

UNDERGRADUATE PREPARATORY CERTIFICATES (International foundation courses)
UCL Undergraduate Preparatory Certificates (UPCs) are intensive one-year foundation courses for international students of high academic potential who are aiming to gain access to undergraduate degree programmes at UCL and other top UK universities.

Typical UPC students will be high achievers in a 12-year school system which does not meet the standard required for direct entry to UCL.

For more information see: www.ucl.ac.uk/upc.

TUITION FEES
The fees indicated are for undergraduate entry in the 2019/20 academic year. The UK/EU fees shown are for the first year of the programme at UCL only. Fees for future years may be subject to an inflationary increase. The Overseas fees shown are the fees that will be charged to 2019/20 entrants for each year of study on the programme, unless otherwise indicated below.

|| UK & EU: £9,250 (2019/20)
|| Overseas: £24,760 (2019/20)

Full details of UCL’s tuition fees, tuition fee policy and potential increases to fees can be found on the UCL Students website.

Additional costs
If you are concerned by potential additional costs for books, equipment, etc. on this programme, please get in touch with the relevant departmental contact (details given on this page).

FUNDING
Various funding options are available, including student loans, scholarships and bursaries. UK students whose household income falls below a certain level may also be eligible for a non-repayable bursary or for certain scholarships. Please see the Fees and funding pages for more details.
