Biochemical Engineering

Bioprocess Design Study (BENG0020)

Description
The course is designed to apply underpinning science and engineering knowledge gained in earlier courses towards the complete design of a bioprocess plant for the production of biotech products arising out of life science discoveries. Such products would typically include biopharmaceutical products arising out of Phase II clinical trials.

Upon completion of the course, a student will acquire skills to:

- Examine key phases in the design cycle applied to facility design
- Create and analyse bioprocess flowsheets
- Economically appraise bioprocess flowsheets
- Apply engineering principles and life science knowledge to an industrially-relevant open-ended problem
- Make decisions under uncertainty and having incomplete data
- Plan, organize and prioritize team activities
- Defend design options and decisions taken

Key information
- Year: 2018/19
- Credit value: 15 (150 study hours)
- Delivery: UG L6, Campus-based
- Reading List: View on UCL website
- Tutor: Prof Suzanne Farid
- Term: Term 1
- Timetable: View on UCL website

Assessment
- Coursework: 90%
- Coursework: 10%
