Introduction to Seismic Design of Structures (CEGE0032)

Description

Outline:
This course is intended to cover the following topics:
1. Intro to Seismology and Earthquake Engineering;
2. Intro to Probabilistic Seismic Hazard Analysis (PSHA);
3. Earthquake Load Representation:
   Response Spectrum and Equivalent Static Approach;
4. Intro to Eurocode 8;
5. Intro to GSA;
6. Response of structures to earthquakes/Conceptual Design;
7. Detailed design of RC structures (Eurocode 8);
8. Advanced topics in Seismic Design;
9. Earthquake case studies;
10. Earthquake Engineering Field Trip;

Aims and Learning Outcomes:

The aims of the course are:

to provide knowledge of the concepts behind seismic design and their implementation in different building codes of practice;
to impart knowledge of materials, structural element behaviour and global structural behaviour under seismic loading;
to provide the knowledge necessary for students to design reinforced concrete structures to Eurocode 8;
to introduce the use of software packages for seismic analysis and design;

The learning outcomes of the course are:
understanding the concepts behind seismic design;

Key information

Year 2018/19
Credit value 15 (150 study hours)
Delivery PGT L7, Campus-based
Reading List View on UCL website
Tutor Dr Carmine Galasso
Term Term 1
Timetable View on UCL website

Assessment

Coursework: 40%
Coursework: 40%
Coursework: 20%

Disclaimer: All information correct as of December 2018. Please note that aspects of the module may be subject to change. UCL will make best efforts to inform applicants of major changes.
understanding the behaviour of building materials, structural members and structural systems under earthquake loading;

having the ability to interpret and critique different seismic codes of practice;

gaining knowledge of how to design civil engineering structures for seismic resistance;
Civil, Environmental and Geomatic Engineering
