Advanced Process Optimisation (CENG0023)

**Description**

**Aims:**
Advanced use of computers in process design, operation and management. Particular emphasis is placed on Process Synthesis.

**Learning Outcomes:**
On completion the students will be expected:
- to be aware of the role of optimisation techniques in plant design, operation and management;
- to be aware of numerical techniques for solving continuous and discrete optimisation problems;
- to be able to formulate and solve complex optimisation problems both analytically and using computational tools;
- to be aware of techniques for process synthesis and be familiar with a contemporary tool.

**Synopsis:**
- Approaches to process synthesis and process optimisation.
- Linear programming by the simplex and graphical methods.
- Introduction non-linear process optimisation, optimality criteria, conditions for an optimum, unconstrained optimisation, constrained optimisation. Application to flowsheet optimisation.
- Process synthesis under uncertainty. Flexibility analysis.

**Key information**

**Year** 2019/20

**Credit value** 15 (150 study hours)

**Delivery** PGT L7, Campus-based

**Reading List** View on UCL website

**Tutor** Prof Lazaros Papageorgiou

**Term** Term 1

**Timetable** View on UCL website

**Assessment**

- Written examination (main exam period): 50%
- Coursework: 50%
