Fluid Particle Systems (CENG0024)

Description

Aims:
This course is designed to convey the fundamentals of fluidization and crystallization and their applications to industrial scale units and sustainable development.

Learning Outcomes:
On completion, students are expected:

- to be able to formulate realistic differential equation descriptions of multiphase systems;
- to have an understanding of the two-phase nature of gas-solid fluidized beds and of how to apply their basic quantitative features to the design of reactors;
- to be able to apply methods to analyse the characteristics and performance of particulate crystal formation systems and to design crystallization equipment.

Synopsis:

- Crystallization processes and crystallizers. The population balance equation and crystallizer design.

Key information

- Year: 2019/20
- Credit value: 15 (150 study hours)
- Delivery: PGT L7, Campus-based
- Reading List: View on UCL website
- Tutor: Dr Luca Mazzei
- Term: Term 2
- Timetable: View on UCL website

Assessment

- Written examination (main exam period): 80%
- Coursework: 20%
