Chemical Engineering

Process Systems Modelling and Design (CENG0025)

Description

**Aims:**
The module aims to develop modelling concepts and simulation skills to consider complex process design in the context of safety and sustainable process plant development.

**Learning Outcomes:**
On completion of this module, the students will be expected to be:

- able to develop computational models for complex plant items;
- able to use contemporary simulation tools to modelling process behaviour;
- able to make informed decisions on process design based on conflicting and missing information in the context of safety and sustainable process plant development.

**Synopsis:**
The following issues will be considered:

- process systems engineering
- process modelling
- process design
- process optimisation
- dynamic simulation
- uncertainty analysis
- model validation

Lectures, tutorials and e-learning resources will provide training in the techniques and tools required to carry out design projects applying advanced design concepts and computational tools.

Key information

**Year**
2019/20

**Credit value**
15 (150 study hours)

**Delivery**
PGT L7, Campus-based

**Reading List**
[View on UCL website](https://www.ucl.ac.uk)

**Tutor**
Dr Michail Stamatakis

**Term**
Term 1

**Timetable**
[View on UCL website](https://www.ucl.ac.uk)

Assessment

- Coursework: 100%
