Description
The purpose of this module is to introduce some aspects of medical instrumentation including micro controllers, control theory and noise and interference in bio signals. Furthermore, students will be introduced to specific considerations involved in designing electronic circuits that are used for medical applications, including safety of medical electronic devices. Students will be able to:
1. Modify and run programs on a microcontroller (Arduino);
2. Understand negative and positive feedback systems and their applications in biomedical engineering;
3. Identify noise and interference in biomedical signals;
4. Design strategies to remove noise/interference from the signals;
5. Identify and test for electrical safety hazards in a given medical electrical/electronic device;
6. Design to eliminate/reduce electrical safety hazards in medical instruments;

Key information

Year 2020/21
Credit value 15 (150 study hours)
Delivery UG L5, Campus-based
Reading List View on UCL website
Tutor Dr Prabhav Nadipi Reddy
Term Term 1
Timetable View on UCL website

Assessment

- Practical examination (departmentally managed): 50.0%
- Written examination (main exam period): 50.0%
