Materials and Engineering for Orthopaedic Medical Devices (MPHY0023)

**Description**

**Summary:**
The purpose of this module is to describe the problems presented in orthopaedics from an engineering and materials perspective, and discuss available solutions and current research.

**Aim:**
1. To be familiar with orthopaedic treatments for various diseases;
2. To be able to describe the properties of bone and biomaterials;
3. To be able to describe in detail biocompatibility and tissue engineering (in the context of orthopaedics);
4. To understand in detail the problems associated with hip implants;
5. To have an understanding of biomechanical aspects of the hip and knee joints;
6. To be familiar with a number of lower limb orthotic devices and current research related to prosthetic limbs;
7. To be able to describe the purpose and principles of gait analysis;
8. To be familiar with medical device regulations associated with orthopaedic medical devices;
9. To have an understanding of biomechanical aspects of the hip and knee joints;

**Key information**

**Year** 2018/19

**Credit value** 15 (150 study hours)

**Delivery** PGT L7, Campus-based

**Reading List** [View on UCL website]

**Tutor** Dr Lynsey Duffell

**Term** Term 1

**Timetable** [View on UCL website]

**Assessment**

- Written examination (main exam period): 80%
- Coursework: 20%
