Description

Machine learning (ML) or artificial intelligence (AI) is ubiquitous and finds its application in various fields in science and healthcare. In this course we will introduce the basic concepts of machine learning including regularized linear models, tree-based models, neural-networks as well as model assessment. The methods are illustrated and introduced using problems relevant to medical imaging: image reconstruction, image enhancement (noise reduction, super-resolution, image quality transfer), modality transfer, image registration and segmentation, and image-based diagnosis (classification and regression). At the end of course, students will have an overview on relevant methods, their advantages and limitations as well as how to apply them in their field.

A video description can be found at the UCL Media Central.

Key information

Year: 2020/21
Credit value: 15 (150 study hours)
Delivery: PGT L7, Campus-based
Reading List: View on UCL website
Tutor: Dr Andre Altmann
Term: Term 2
Timetable: View on UCL website

Assessment

- Coursework: 50.0%
- Group project: 50.0%
