Astrophysics involves a broad frontier of technologies including materials science, optics and electronics. This three-year programme teaches students to apply their knowledge of physics to astronomical observation and to the interpretation of the data and images obtained.

**Key information**

**Programme starts**
September 2020

**Location**
London, Bloomsbury

**Degree benefits**

- The programme is accredited by the Institute of Physics (IOP) and includes the very latest developments and discoveries in the field, based on our highly rated research.
- Collaborative links with both industry and international research laboratories provide insight into the practical application of your studies.
- You will undertake practical work at the UCL Observatory (UCLO) and benefit from our close association with the Royal Astronomical Society.

**Accreditation**

This programme is accredited by the Institute of Physics. Holders of accredited degrees can follow a route to Institute of Physics membership and the Chartered Physicist (CPhys) professional qualification. Graduates of accredited Integrated Master’s (MPhys or MSci) degrees have fulfilled the educational requirements for CPhys status, while graduates of accredited Bachelor’s (BSc) degrees have partially fulfilled these requirements.

**Degree structure**

In each year of your degree you will take a number of individual modules, normally valued at 15 or 30 credits, adding up to a total of 120 credits for the year. Modules are assessed in the academic year in which they are taken. The balance of compulsory and optional modules varies from programme to programme and year to year. A 30-credit module is considered equivalent to 15 credits in the European Credit Transfer System (ECTS).

Core modules in the first two years provide a grounding in mathematics and classical and quantum physics. You will also undertake modules which build up an increasing exposure to topics in astronomy and astrophysics. This starts in the first year with core modules in Physics of the Universe and Practical Astronomy. This is followed in the second year by Astrophysical Processes: Nebulae to Stars and Practical Astrophysics, leading into core third-year modules in Interstellar Physics, Physical Cosmology, and Astronomical Spectroscopy. The third year also provides for optional modules to further enhance and enrich your knowledge of astrophysics topics.

This programme is offered both as a three-year BSc and a four-year MSci, with common structures and subjects for the first two years. However, the additional fourth year of the MSci programme allows for a greater depth of study and we recommend you apply for an MSci initially, as this keeps more options open.

**YEAR ONE**

**Core or compulsory module(s)**

- Classical Mechanics
- Mathematical Methods I
- Mathematical Methods II
- Practical Skills 1A
- Practical Skills 1C
- Physics of the Universe
- Thermal Physics
- Waves, Optics and Acoustics

**Optional modules**

- All first-year modules are compulsory.

**YEAR TWO**

**Core or compulsory module(s)**

- Astrophysical Processes: Nebulae to Stars
- Electricity and Magnetism
- Mathematical Methods III
- Physics of the Solar System
- Practical Astrophysics 2A
- Quantum Physics
- Statistical Thermodynamics

**Optional modules**

- One optional module from the following list:
- Astrobiology
- Environmental Physics
- Mathematics for Physics and Astronomy

YEAR THREE

Core or optional module(s)

- Advanced Physics
- Advanced Astrophysics
- Advanced Cosmology
- Advanced Spectroscopy
- Advanced Instrumentation

Optional modules

- One optional module from the following list:
- Advanced Data Analysis
- Advanced Computer Science
- Advanced Mathematics
- Advanced Astronomy
- Advanced Experimental Physics

YEAR FOUR

Core or optional module(s)

- Advanced Research Project
- Advanced Thesis
- Advanced Seminar

Optional modules

- One optional module from the following list:
- Advanced Special Topics
- Advanced Applications
- Advanced Techniques
- Advanced Observing
- Advanced Analysis

YEAR FIVE

Core or optional module(s)

- Advanced Research Project II
- Advanced Thesis II
- Advanced Seminar II

Optional modules

- One optional module from the following list:
- Advanced Special Topics II
- Advanced Applications II
- Advanced Techniques II
- Advanced Observing II
- Advanced Analysis II
**Final Year**

**Core or compulsory module(s)**
- Astronomical Spectroscopy
- Interstellar Physics
- Physical Cosmology
- The Physics of Stars
- Practical Astronomy 1 - Techniques

**Optional modules**
- You will select one of the following:
  - Group Project
  - Practical Astronomy 2 - Applications
  - Astrophysics Group Project
- You will also select 1.0 credits of astrophysics options. Options may include:
  - Astrobiology
  - Electromagnetic Theory
  - Energy and Climate
  - Nuclear and Particle Physics
  - Physics of Oceans, Ice Sheets and Climate (1.0 credits)
  - Physics of the Earth
  - Quantum Mechanics
  - Scientific Computing Using Object Oriented Languages
  - Theory of Dynamical Systems

**Your learning**
Teaching is delivered through lectures, laboratory (and as appropriate, observatory) practical sessions, and supervised problem-solving tutorials. These tutorials are designed to deal with lecture-based questions, enlarge on topics addressed in lectures, and allow clarification and in-depth discussion of new concepts.

**Assessment**
Assessment will normally involve end-of-year examinations, and an element of assessed coursework. For practical work you will be continuously assessed.

**Your career**
Your scientific training will equip you with an understanding of mathematics, and of physical principles and techniques, as well as transferable skills in analysis, rational argument and innovative problem solving. Surveys by the IOP indicate that physicists’ versatility is welcomed by a vast range of professions.

Around half our graduates choose to pursue further study for an MSc or PhD. A PhD opens up the possibility of an academic or research career in a university or research institute. Alternatively, like many of our graduates, you may consider employment in research, design, development, computing, finance, marketing and teaching, among others.

**Your application**
Application for admission should be made through UCAS (the Universities and Colleges Admissions Service). Applicants currently at school or college will be provided with advice on the process; however, applicants who have left school or who are based outside the United Kingdom may obtain information directly from UCAS.

In addition to the subjects and grades specified in the qualifying examinations, we are also looking for evidence of self-motivation and an enthusiastic interest in the subject. This may be demonstrated through paid or voluntary work experience, academic project work, or your interests and hobbies beyond the school curriculum.

Your application will be carefully assessed based on your UCAS form and reference. If you are made an offer, you will be invited to a Physics Offer Holder’s Day. This will include presentations, a tour of facilities and an opportunity to meet current students and staff members. Attendance is strongly recommended as we cannot provide private tours of the department at the moment.
Entry requirements

A LEVELS
Standard Offer: AAA. Mathematics and Physics required.
Contextual Offer: AAB. A in Mathematics and Physics required.

GCSE
English Language and Mathematics at grade C or 5. For UK-based students, a grade C or 5 or equivalent in a foreign language (other than Ancient Greek, Biblical Hebrew or Latin) is required. UCL provides opportunities to meet the foreign language requirement following enrolment, further details at: www.ucl.ac.uk/ug-reqs

IB DIPLOMA
Standard Offer: 38 points. A total of 18 points in three higher level subjects including Mathematics and Physics at grade 6, with no score below 5.
Contextual Offer: 36 points. A total of 17 points in three higher level subjects including Mathematics and Physics at grade 6, with no score below 5.

CONTEXTUAL OFFERS – ACCESS UCL SCHEME
As part of our commitment to increasing participation from underrepresented groups, students may be eligible for a contextual offer as part of the Access UCL scheme. For more information see www.ucl.ac.uk/prospectus

OTHER QUALIFICATIONS
UCL considers a wide range of UK and international qualifications for entry into its undergraduate programmes. Full details are given at: www.ucl.ac.uk/otherquals

UNDERGRADUATE PREPARATORY CERTIFICATES (International foundation courses)
UCL Undergraduate Preparatory Certificates (UPCs) are intensive one-year foundation courses for international students of high academic potential who are aiming to gain access to undergraduate degree programmes at UCL and other top UK universities.

Typical UPC students will be high achievers in a 12-year school system which does not meet the standard required for direct entry to UCL.

For more information see: www.ucl.ac.uk/upc.

TUITION FEES
The fees indicated are for undergraduate entry in the 2019/20 academic year. The UK/EU fees shown are for the first year of the programme at UCL only. Fees for future years may be subject to an inflationary increase. The Overseas fees shown are the fees that will be charged to 2019/20 entrants for each year of study on the programme, unless otherwise indicated below.

// UK & EU: £9,250 (2019/20)
// Overseas: £26,740 (2019/20)

Full details of UCL’s tuition fees, tuition fee policy and potential increases to fees can be found on the UCL Students website.

Additional costs
If you are concerned by potential additional costs for books, equipment, etc. on this programme, please get in touch with the relevant departmental contact (details given on this page).

FUNDING
Various funding options are available, including student loans, scholarships and bursaries. UK students whose household income falls below a certain level may also be eligible for a non-repayable bursary or for certain scholarships. Please see the Fees and funding pages for more details.
