Medical Electronics and Neural Engineering (MPHY0037)

Description
This course brings together material from engineering, physics and physiology which is relevant to situations in which electronic devices are in direct contact with the body.

Body contact is common in clinical practice with medical devices being used for recording bipotentials, such as ECG, and for stimulation.

The course focusses on interaction with the nervous system.

This is relevant to rehabilitation, intensive care, clinical neurophysiology, neuroprosthetics, etc.

It should be useful:
to medical students who will encounter these applications in clinical practice;
to students who intend to go on to biomedical research;
to engineering students who go on to specify, design, test or use clinical electrical equipment.

Usually, there are about equal numbers from engineering, the sciences, and intercalated medical students;

Key information
Year 2018/19
Credit value 15 (150 study hours)
Delivery UG L6, Campus-based
Reading List View on UCL website
Tutor Prof Nick Donaldson
Term Term 2
Timetable View on UCL website

Assessment
- Written examination (main exam period): 80%
- Coursework: 20%
